Oxygen Pro Products Food Establishment Safety Letter

This is to confirm that the Oxygen Pro and Viva!E Cartridges, supplied by Fragrance Delivery Technologies Ltd., are safe for use in Food Establishments. They comply with all current regulations and safety requirements.

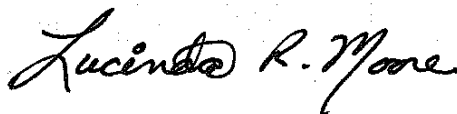

The Fragrances used in the Oxygen-Pro Dispenser cartridges are supplied by ISO registered companies and comply with the IFRA guidelines to ensure that they are used at the right concentration for this type of product. The Safety Data Sheet and regulatory label language are dictated by 29 CFR 1910.1200 and Regulation (EC) No 1272/2008 or the CLP Regulations (Classification, Labeling and Packaging). The fragrance oils used in the Cartridges do not contain any materials identified as Substances of Very High Concern (SVHC's) on the REACH Candidate list. Our fragrances comply with REACH, IFRA, CARB, Health Canada, Prop 65, have no substances covered by the Montreal Protocol, no substances derived from endangered species (CITES), Phthalate free, and comply with all international inventories.

The products are not detrimental to Human health or the environment during supply, use and disposal, provided that the products are used in accordance with the instructions, product labeling and Safety Data Sheets.

The outer plastic cage of the cartridge is made of polypropylene which is readily recyclable in all major cities. The inner plastic material is made of polyethylene and is heavily recycled with the demand for recycled PE increasing year over year. The fragrance emanator is made of cellulose that is certified by SFI.

Fragrance Delivery Technologies does not test any of its products on animals.
